ENERGY TRANSITION TRACK WINNER IS THE BENCOM TEAM!

- Switch your energy provider seamlessly -

BENCOM made it possible during the Hackathon that if consumer changes their energy provider, all parties can see this information right away. Previously, this switch was taking 14 days to handle, and sometimes consumer was cut off from the energy grid. Fixing this problem was costing consumer 600Euros in average. With the platform BENCOM developed, all the parties can see the provider consumer is switching to right away. One of the reasons for the jury's decision was the scalability of the idea. Not only internationally, but this idea can also be applied in other sectors, such as telecom. Another reason was the industry knowledge. Since the team is working in the industry for many years, they could bring a real problem from the industry and solved it during 3 days of the Hackathon.

Last but not least, Bencom got the prize, however other teams are still having conversations with the sponsoring companies. The success is not only limited to the final prize, future collaborations and investments are still in discussion. Time will show which teams will succeed at implementing their ideas!
